FOUR PANEL CONFIGURATIONS

Privacy Soundproof Studio Doors ensure the integrity of your studio soundproofing. Made to fit your framed opening, there are no design limitations. Remarkable results are possible when the right product is utilized.

## PRIVACY STUDIO SLIDING GLASS DOORS

### STUDIO DESIGN:

Blocking noise through recording studio doors is a critical design element for your studio. In too many cases the performance of recording studio doors does not match the STC Ratings of the walls; this will result in a poor performing studio as the overall soundproofing will be only as good as the weakest link. It is critical that we consider all the components in your recording studio, and one of the most important is the performance of your studio doors.

Privacy Studio Sliding Doors are a simple, effective solution to your studio door requirements. By using specially manufactured laminated glass at .650" thick, rather than dual pane glass we are able to achieve remarkable results. For STC values in the 60's we design our studio doors to be used in dual sets, one with .650" laminated glass and the other with .25" laminated glass to maximize performance. Both doors will be mounted in the same wall opening, the larger the airspace the better the results.

### PROVEN RESULTS, LAB TESTED COMPLETE DOORS:

Privacy Recording Studio Doors have been tested fully assembled in a wall opening at WEAL Laboratories. For any comparison you must see testing for the doors, not for the glass alone. Most important is the actual performance of the doors at low frequency, compare our results before making a decision. Specially designed seals, completely removable panels, STC values previously unavailable and cost effectiveness not matched by any other manufacturer, make your choice a simple one.
