

PRIVACY SOUNDPROOF WINDOWS RECORDING STUDIOS

STC 60+ FIXED AND OPERABLE STUDIO WINDOWS

SPECIALY MANUFACTURED .625 LAMINATED GLASS
FOR PREVIOUSLY UNATTAINABLE PERFORMANCE

LAB TESTED, COMPLETELY ASSEMBLED WINDOWS

LAB TESTED WINDOWS, NOT JUST THE GLASS

While laminated glass is an industry standard for the construction of soundproof windows, publishing Lab Test for complete 4 x 6 windows is not. Our Studio Windows have been tested, completely assembled in a certified acoustics lab. You can be assured that we will provide the best available solution along with expert advice for your recording studio.

STUDIO WINDOWS

Soundproofing your recording studio is a must; windows and doors remain the biggest challenge in this process. Studio windows must be able to provide STC values of 60 or more to meet the performance of the walls as the performance of the studio soundproofing will be limited by the weakest link. The availability of recording studio windows that are both effective (STC 60+) and affordable has been a challenge for the studio builder or home studio enthusiast. Many times the responsible party settles for a "homemade" studio window that provides little in the way of true low frequency soundproofing.

Sound Isolation Company introduces Privacy Studio Windows; capable of STC 60+ performance, easily installed in the field and available at prices that make any other option pale in comparison. Manufactured from specially manufactured 5/8" laminated glass & proprietary seals and gaskets, Privacy Soundproof Windows solve the problem of soundproofing your studio and control room. You do not have to lose visibility to meet the high STC requirements in your recording studio design.

FLEXIBLE DESIGN OPTIONS

Privacy Studio Windows are designed to be used in sets of two and available in several configurations. Both fixed models and operable models are available. We know of no other operable studio windows that perform better. Typically we specify one window with 5/8" laminate glass and the other with 1/4"; the windows are installed with an air space between, all in the same window opening. We also tested various combinations in 8", 10.25" and 11" walls for a clear picture of the performance. Easily installed and adjustable in the field our design fits your wall construction, not the other way around.
